INTRODUCTION

- Sardinia is an Italian region located in the Western Mediterranean Sea.
- In the past, the Sulcis-Iglesiente area in SW Sardinia was one of the most important metal mining districts in Europe.
- Abandoned mining areas are a crucial worldwide environmental problem posing serious risks for human health and ecosystems.
- Phytoremediation has been recognized as a cost-efficient and environmentally friendly technology for in situ restoration of mining areas implying the creation of a vegetation cover for the long-term metal stabilization.
- The microorganism-plant association is a crucial point in the survival and metal tolerance of plants in metal contaminated environments.

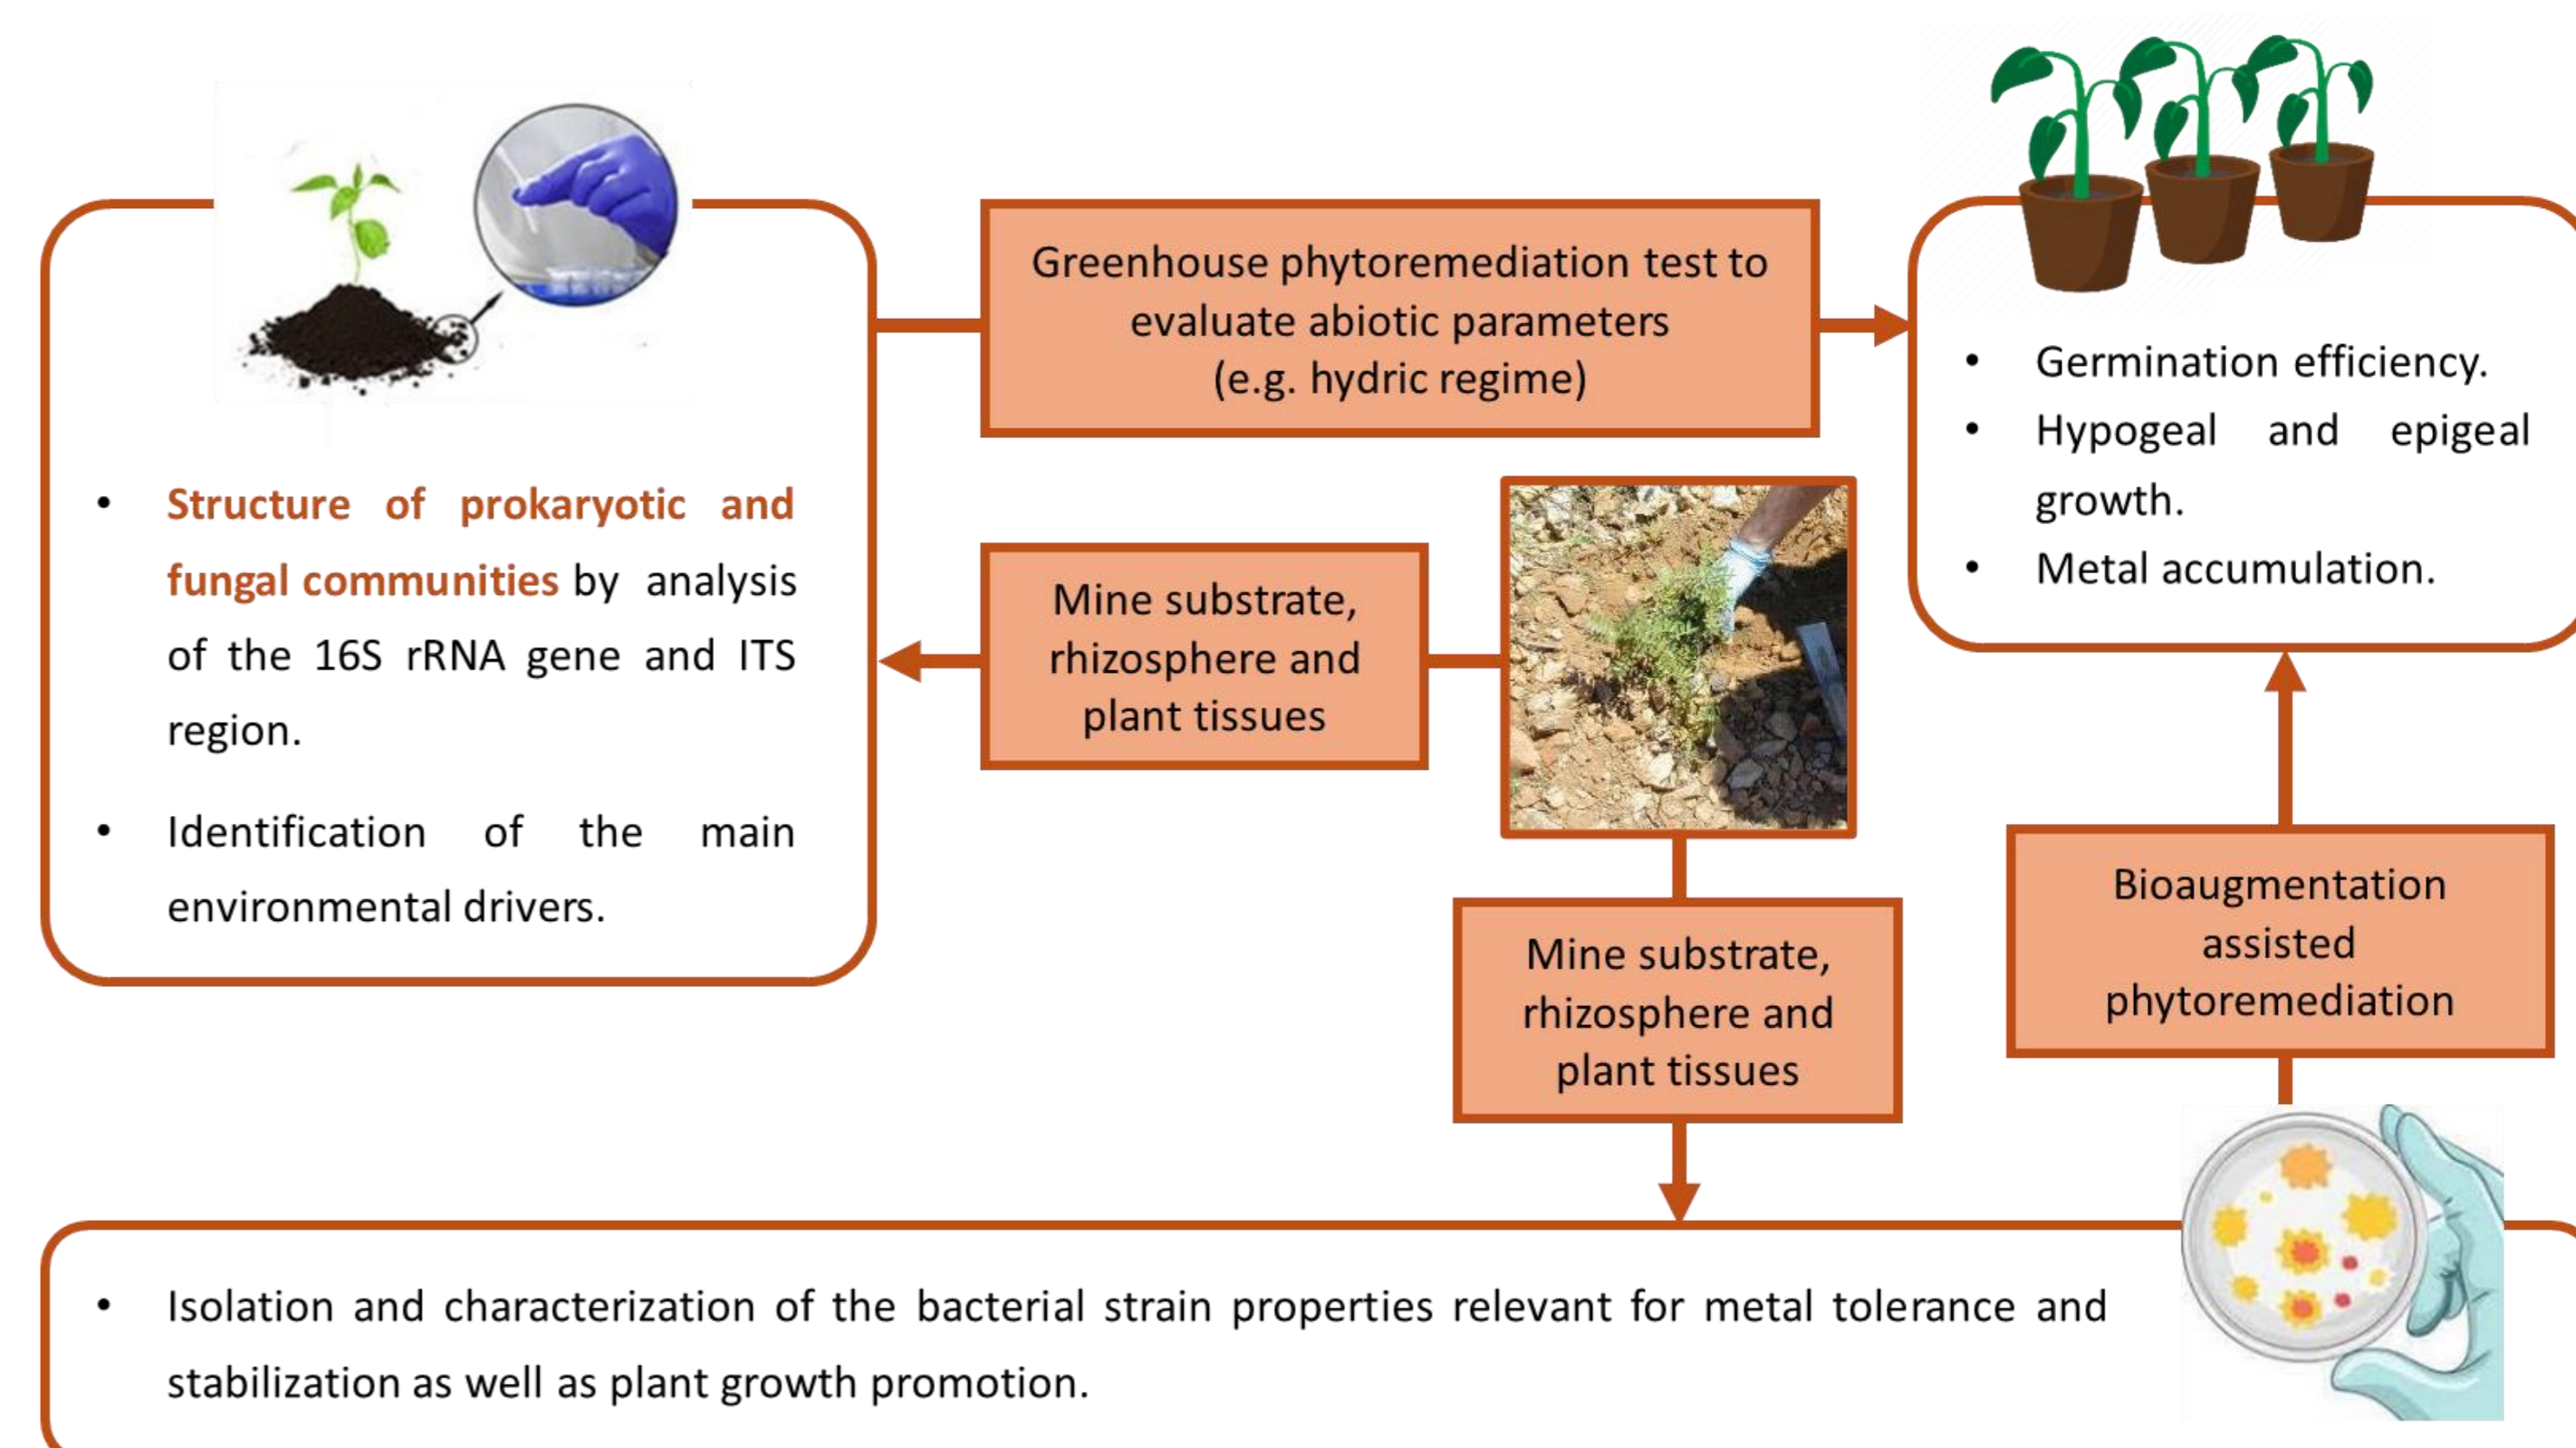

OBJECTIVE

Study of plant - microbes interaction for the improvement of phytostabilization as green technology in the restoration and revegetation of mine tailing dumps.

EXPERIMENTAL STRATEGY

ANNUAL MONITORING OF MICROBIOLOGICAL PARAMETERS IN MINE SUBSTRATE

PHYSICO-CHEMICAL ANALYSIS

Table 1. Physico-chemical parameters in the mine substrates from the Campo Pisano tailing dump. Each value is the average of five samples.

Parameter	Mean±SD	CV%
Moisture (%)	4.9±2.3	46.5%
pH (KCl)	6.7±0.4	6.2%
Inorganic carbon (g kg ⁻¹ dw)	14.9±8.4	56.0%
Organic carbon (g kg ⁻¹ dw)	4.2±1.4	32.8%
Total nitrogen (g kg ⁻¹ dw)	1.09±0.53	48.1%
Total phosphorous (g kg ⁻¹ dw)	0.42±0.13	30.8%
Bioavailable phosphorous (g kg ⁻¹ dw)	5.7±1.8	32.5%

Bold: p < 0.05; SD, standard deviation; CV%, coefficients of variation; dw, dry weight

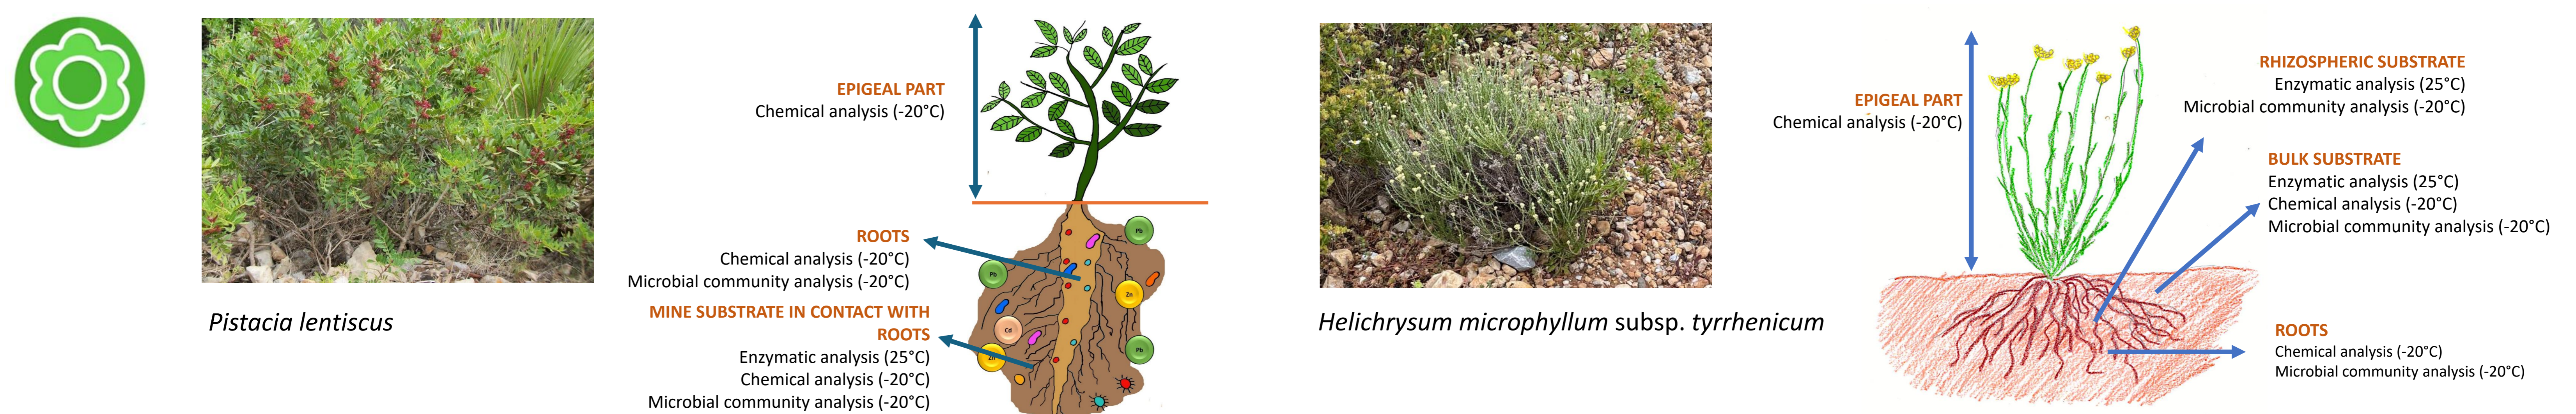

DEHYDROGENASE ACTIVITY

ABUNDANCIES OF HETEROTROPHIC BACTERIA

PLANT SAMPLING

RESULTS

- The metabolic activity of microorganisms in mine substrates was evaluated by dehydrogenase assay that showed a significant increase starting inside, moving toward the border, and extending outside the mine tailing dump.
- The concentration of heterotrophic bacteria was determined by Most Probable Number technique and followed the same trend.
- Currently, we are carrying out the analysis of the bacterial and fungal communities by the Next Generation Sequencing of rRNA genes from hypogeal tissues and substrate samples.
